The Middle Surface

Let Σ be an oriented surface in \mathbb{R}^3 with H and K the mean and Gaussian curvatures. For $p \in \Sigma$ consider the point M(p) along the normal line to Σ at p that we get by moving from p a signed distance $\frac{H}{K}$ along the normal line.

The Middle Surface

Let Σ be an oriented surface in \mathbb{R}^3 with H and K the mean and Gaussian curvatures. For $p \in \Sigma$ consider the point M(p) along the normal line to Σ at p that we get by moving from p a signed distance $\frac{H}{K}$ along the normal line. In other words:

$$M(p) = X(p) + \frac{H}{K}N(p)$$

This defines a surface called the Middle Surface of the congruence of lines normal to Σ .

Middle Plane and Middle Spheres

The plane passing through M(p) and orthogonal to N(p) is called the Middle Plane at p.

Middle Plane and Middle Spheres

The plane passing through M(p) and orthogonal to N(p) is called the Middle Plane at p.

The congruence of spheres centered at M and with radius $\left|\frac{H}{K}\right|$ is called the Middle Sphere Congruence.

Appell and Bonnet surfaces

P.Roitman, joint work with W.Ferreira Area Preserving Transformations and Classical Differential Geometry

(日)

Appell and Bonnet surfaces

Appell Surfaces

Appell surfaces are defined by the following property: All middle planes pass through a fixed point.

Appell and Bonnet surfaces

Appell Surfaces

Appell surfaces are defined by the following property: All middle planes pass through a fixed point.

Bonnet Surfaces

Bonnet surfaces are defined as surfaces for which the middle surface is contained in a plane.

Appell surfaces and APT

Some Questions

Some Questions

• Is there a choice of φ such that the congruence is normal, i.e., admits orthogonal surfaces?

イロン 不同 とくほう イロン

- Is there a choice of φ such that the congruence is normal, i.e., admits orthogonal surfaces?
- If so, is there some special property common to the orthogonal surfaces of such congruence?

- Is there a choice of φ such that the congruence is normal, i.e., admits orthogonal surfaces?
- If so, is there some special property common to the orthogonal surfaces of such congruence?

The answers

The answers

• Yes, we get normal congruences if and only if φ is a harmonic function.

The answers

- Yes, we get normal congruences if and only if φ is a harmonic function.
- The special property of the orthogonal surfaces to such congruences is that they are Appell surfaces.

The answers

- Yes, we get normal congruences if and only if φ is a harmonic function.
- The special property of the orthogonal surfaces to such congruences is that they are Appell surfaces.

The answers

- Yes, we get normal congruences if and only if φ is a harmonic function.
- The special property of the orthogonal surfaces to such congruences is that they are Appell surfaces.

So, we may generate examples of Appell surfaces using harmonic functions.

Bonnet surfaces and APT
