イロト イボト イヨト イヨト

Let us given two density functions  $f, h: \mathbb{R}^n \to (0, +\infty)$ .

For any measurable set  $E \subset \mathbb{R}^n$ , we set

$$V_f(E) := \int_E f(x) \, dx$$

and

$$P_h(E) := \int_{\partial^* E} h(x) \, d\mathcal{H}^{n-1}(x),$$

We are interested in the following minimization problem:

$$\inf \{P_h(E) \colon E \subset \mathbb{R}^n \text{ with } V_f(E) = m\}.$$

#### Theorem (Morgan, Trans. AMS 2003)

Let f = h be of class  $C^{k,\alpha}(\mathbb{R}^n, \mathbb{R}^+)$  for some  $k \ge 1$  and  $\alpha \in (0, 1]$ . Then the boundary of any isoperimetric set is of class  $C^{k+1,\alpha}$ , except for a singular set of Hausdorff dimension at most n - 8.

QUESTION: What about less regular densities?

イロト イボト イヨト イヨト

We show that the following implication holds true:

If E is an isoperimetric set w.r.t. the density  $f \in C^{0,\alpha}$ 

#### THEN

*E* is an  $\omega$ -minimal set for the classical perimeter, i.e.  $\forall B_r$  and  $\forall F$  such that  $F \triangle E \subset \subset B_r$ , we have

 $P(E, B_r) \leq P(F, B_r) + \omega(r) \cdot r^{n-1},$ 

for some modulus of continuity  $\omega$ .

イロト イヨト イヨト イヨト

Then, the regularity of *E* follows by standard regularity theory for  $\omega$ -minimal sets:

Theorem (Tamanini, 1984)

If E is  $\omega$ -minimal with  $\omega(r) = r^{2\sigma}$ , then  $\partial^* E \in C^{1,\sigma}$ .

**Main ingredient** in the proof of the previous implication:  $\varepsilon - \varepsilon^{\beta}$  property. We say that *F* fulfills the  $\varepsilon - \varepsilon^{\beta}$  property with constant *C* if for any ball *B* such that  $\mathcal{H}^{n-1}(B \cap \partial^* F) > 0$ , there exists a constant  $\overline{\varepsilon} > 0$  such that, for every  $|\varepsilon| < \overline{\varepsilon}$ , there is a set  $G \subseteq \mathbb{R}^n$  such that

 $G \triangle F \subset \subset B$ ,  $V_g(G) - V_g(F) = \varepsilon$ ,  $P_f(G) \le P_f(F) + C |\varepsilon|^{\beta}$ .

Thanks to the previous results, we know that  $\partial^* E$  is locally the graph of a function u, which minimizes the functional

$$\int_{B_R} h(x,w) (1+|Dw|^2)^{\frac{1}{2}} dx$$

among all functions w satisfying the constraint

$$\int_{B_R} \int_0^{w(x)} f(x,t) \, dt \, dx = m$$

for a given constant *m* and with prescribed boundary values on  $\partial B_R$ .

## Since *h* is merely Hölder continuous, we cannot write the associated Euler-Lagrange equation!!

Idea: we introduce a comparison problem, and consider v to be the minimizer of

$$\int_{B_R} \left( 1 + |Dv|^2 \right)^{\frac{1}{2}} dx, \qquad v = u \quad \text{on } \partial B_R;$$

under the constraint

$$\int_{B_R} \int_0^{v(x)} f(x,t) \, dt \, dx = \int_{B_R} \int_0^{u(x)} f(x,t) \, dt \, dx = m$$

Hence v satisfies the E-L equation:

$$\int_{B_R} D_z a(Dv(x)) \cdot D\varphi(x) \, dx + \lambda \int_{B_R} f(x, v) \varphi(x) \, dx = 0.$$

Eleonora Cinti (Bologna)

Eleonora Cinti (Bologna)

In order to prove that  $u \in C^{1,\alpha/(2-\alpha)}$ , it is enough to prove that for any ball  $B_{\rho}(y) \subset B_{R}(0)$ , we have

$$\int_{B_{\rho}(y)} |\partial_{i}u - (\partial_{i}u)_{B_{\rho}(y)}|^{2} dx \leq C \rho^{n-1+\frac{2\alpha}{2-\alpha}}.$$

We will do this in two setps:

**Step 1.** We first prove suitable decay estimates for the solution v of the comparison problem;

**Step 2.** We transfer such decay estimates from v to the solution of our original problem u.

イロン イヨン イヨン イヨン 三日

イロン イ団 とく ヨン イヨン

If  $\gamma \ge \alpha$  we are happy! Otherwise, the previous estimates needs an improvement. Lemma (Improved error estimate) Let  $u \in C^{1,\sigma}(B_R)$  with  $\sigma \le \frac{\alpha}{2-\alpha}$ , then we have that

 $|\lambda| \lesssim R^{\sigma-1}$ 

and

$$\int_{B_R} |Du - Dv|^2 dx \lesssim R^{n-1+\frac{2\alpha}{2-\alpha}} + R^{n-1+\frac{2}{1-\gamma}(\gamma+\sigma)}.$$

## Step 1: Decay estimates for v

#### Proposition

Let  $u \in C^{1,\sigma}(B_R)$  with  $\sigma \leq \frac{\alpha}{2-\alpha}$  and let v be a solution of the comparison problem.

Then, for any  $0 < r < \rho$ , we have

$$\int_{B_r(x_0)} |\partial_i v - (\partial_i v)_r|^2 dx \lesssim \left(\frac{r}{\rho}\right)^{n-1+2(\gamma+\sigma)} \int_{B_\rho(x_0)} |\partial_i v - (\partial_i v)_\rho|^2 dx + r^{n-1+2(\gamma+\sigma)},$$

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <

## Conclusion

#### Combining **Step 1** and **Step 2**, we improve the regularity of u

### from $C^{1,\gamma}$ to $C^{1,\gamma+\sigma}$ .

This allows to iterate the errore estimate Lemma and the deacy estimates for v, to conclude

$$u\in C^{1,\frac{\alpha}{2-\alpha}}.$$

## **Final Remarks**

#### • Such regularity is optimal, we provide an explicit example;

- even if the final regularity does not depend on  $\gamma$  we need to assume  $f \in C^{0,\gamma}$ ;
- **Open question**: can we remove such assumption on *f*?
